# Case Study

**prepp IAS**

Using DotContext's AI contextual engine to align Prepp IAS with serious UPSC aspirants during high-focus study sessions.

**Prepp IAS**

# The Challenges

Digital advertising for competitive exams often suffers from "distraction fatigue," where ads appear during a student's leisure time rather than their study time.

**Ads appearing on irrelevant videos where aspirants are not in a learning mindset.**

**Risk of ads being placed on "clickbait" educational channels or unverified news sources.**

**Difficulty in identifying the moment an aspirant shifts from casual browsing to intense subject research.**

**Premium brands requiring high-attention, premium content environments**

# Objectives

**Highlight the 1:1 mentorship features of the Prepp IAS**

**Reach dedicated students (aged 20–30) who are actively seeking exam strategies.**

**Position Prepp IAS as the authoritative voice in UPSC preparation.**

**Reduce budget spend on non-aspirant viewers.**

# DotContext Strategy

## AI-Powered Contextual Whitelisting on YouTube

DotContext analyzed YouTube content frame by frame to ensure Prepp IAS ads were served only during high-value moments, including:

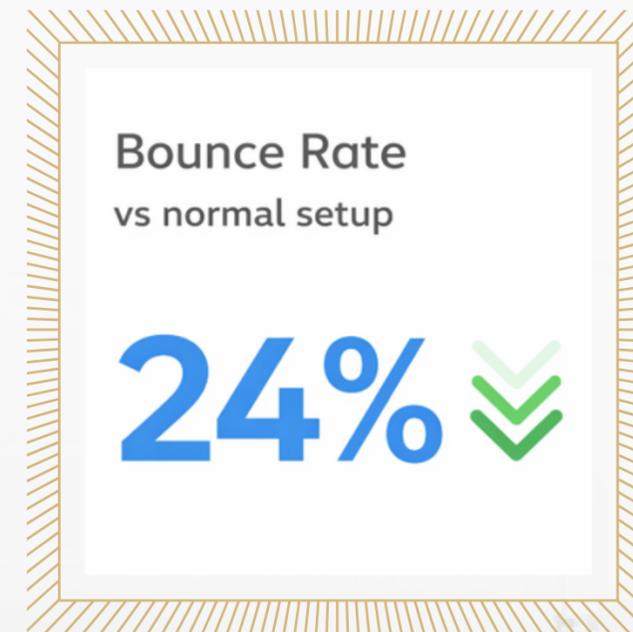

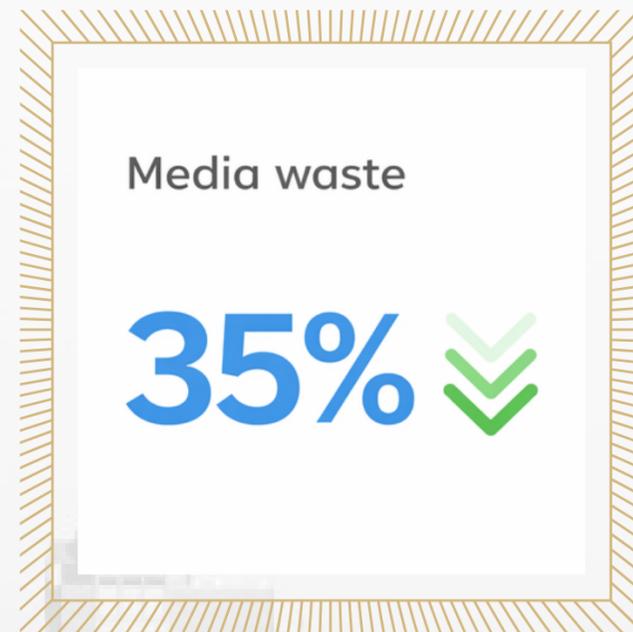

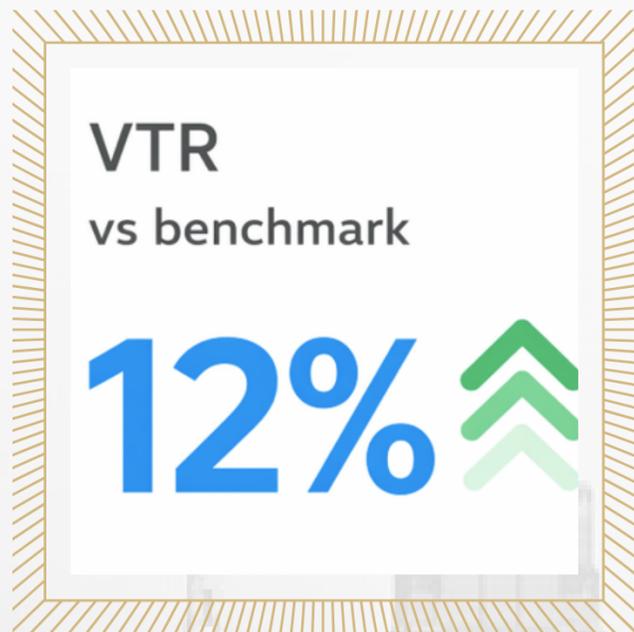

- UPSC Subject Deep-Dives
- Current Affairs Analysis
- Strategy & Topper Talks
- Productivity & Study Vlogs

**This ensures the brand message appears as the next logical step in the viewer journey, not as an interruption.**

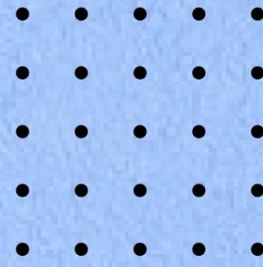

# The Result ?

## Benchmark-Beating Performance

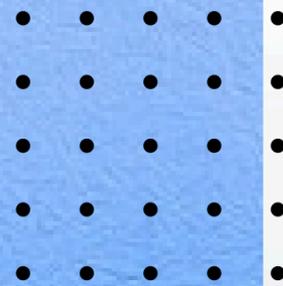

**By placing Prepp IAS in a "study-first" environment, the campaign turned passive viewers into potential candidates.**
